IOWA SECTION

SUBJECT: Waterloo Industries Phone Complaint

Dear Pete:

The attached phone inquiry/complaint was made to Morris Preston last Friday. In checking our records on this site (IAD005277959) I found that this anonymous complaint looks remarkably similar to the situation described in the original Site ID and I note that CERCLIS indicates that a PA was completed in 1987 by EPA. We do not seem to have a copy of that PA and would appreciate it if you would send a copy of that document for our records. In addition Morris would like to know whether you feel that the concern voiced in this complaint has been adequately addressed.

Thanks for your attention in this matter. Please call if you have any questions, (515)281-7040.

Respectfully,

Cal Lundberg
Environmental Specialist
Solid Waste Section

CONVERSATION			
<p>This site is on EDA's Cerclis list. I'm not sure what they intend to do. Thanks for calling.</p>		<p>Waterloo industries at 300 Ansbrough in Waterloo, dumped lead based paint from 1940-1970 in a lagoon area N of the plant. The area is now a parking lot for employees. I was wondering why this was never dug up? I observed it when I drove by the area, and employees have told me of this activity. It must be seeping into the groundwater.</p>
